Physics PhD Atlas 2027 · version 1.1 · data checked October 21, 2026

Thank you for buying the Atlas. Your kit contains:

File	What it's for
Atlas.html	Offline program explorer. Open it in any browser, filter, star programs, export your shortlist. Tap any value to see the exact official sentence and its link.
Atlas.xlsx	Planner workbook: Programs, Shortlist (auto-fills deadlines, fees, rules), Budget, Recommenders, Supervisor outreach, Sources. Works in Excel, Google Sheets (File → Import) and LibreOffice.
Atlas.csv	The same program data for any other tool.
Playbook.pdf	Step-by-step guidance: timeline, English tests, GRE, Canadian supervisors, how Europe differs, SOP, letters, fee waivers, checklist.
LICENSE.txt	What you may and may not do with the files.

Your first 15 minutes

1. Open **Atlas.html**, then set *Physics GRE* and *English-test waiver* to match your situation.
2. Star 8-15 programs and click **Export shortlist (CSV)**, or pick them in the **Shortlist** tab of Atlas.xlsx.
3. Read Playbook Sections 2-7, which cover the decisions with deadlines this month (including Europe).
4. Before paying any fee, click the value and open the official page. Rules change mid-cycle.

What the labels mean

- **Not stated**: the official pages we checked did not say. This is *not* a "no", so ask the program.
- **Year inferred**: the page gave a day and month only; we assumed the 2027-entry cycle.
- **Per position / Rolling**: no central deadline. You apply to a professor or an advertised position (common in Europe).
- **Sources conflict**: two official pages disagree. We show both and use the safer number.

Updates and corrections

You get every update for the Fall 2027 cycle free. Gumroad emails you when a new version is uploaded. If you spot a changed or wrong value, reply to your purchase receipt with the program name and the page link.
